(57) **ABSTRACT**

A protective case for an electronic device includes a protective shell and a flexible portion. The protective shell has an inner surface, an outer surface, and side members that define a perimeter of the protective shell. The side members at least partially cover respective sides of the electronic device when the electronic device is in the protective shell. The protective shell also has cutouts extending from the inner surface to the outer surface. The flexible portion is disposed on the inner surface of the protective shell and extends through cutouts of the protective shell to at least the outer surface of the protective shell.
